The DNA sequence, vectors containing it, protein encoded by it, or antibodies recognising the protein can be used for modulating plant cell cycle, plant cell division and/or growth, for influencing the activity of mitogenic cyclin in a plant cell, as positive or negative regulator of cell proliferation, for modifying the growth inhibition caused by environmental stress conditions, or for use in a screening method for the dentification of inhibitors or activators of cell cycle proteins. A compound which is an activator or inhibitor of the mitogenic cyclin can be used as a growth regulator and/or herbicide. The proteins can also be used to influence cell division progression in yeast, mammals and

```

This sequence represents the CYCD2;1 cDNA from Nicotiana tabacum which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase mumber of flowers, seeds or fruits per plant, increase root development, number of flowers, seeds or fruits per plant, increase root developme reduce height and to delay flowering in a range of plants, e.g. legum grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower, carnation, chrysanthemum, rose, tulip, etc.

        recombinant expression cassettes (including incycl in sense or antisense orientation), host cells, transgenic plants (especially corn, sorghum, sunflower, safflower, wheat, rice, alfalfa or coilseed Brassica) and antibody compositions. A claimed method of modulating the level of Cycl protein in a cell comprises transforming the cell with a recombinant expression cassette comprising a Cycl polynucleotide linked to a promoter, and growing the cell for a time sufficient to induce expression of the cycl protein in the cell. The Cycl protein is present in an amount sufficient to modulate (increase or decrease) the cycl protein to alter cell division, increase the number of cells increase the growth rate, increase crop yield, alter plant height or size, enhance or inhibit organ (seed, root, shoot, ear, tassel, stalk, pollen, stamen) growth, produce organ ablation, compositive selection, increase plant regeneration, plants, enhance embryogenic response, increase callus induction, provide consitive selection; increase plant regeneration, alter the time constitution of the const
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of an isoform of the maize ZmCycD gene that encodes cyclin D (Cych, see AA79322), a protein necessary for progression from G1 into S phase. The encoded protein binds to CDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma. associated protein, releasing the E2F transcription factor which activates DNA synthesis. The invention provides maize CycD polynucleotides (see AA294581-84) and polypeptides (see AAY79321-24) that are involved in cell cycle regulation. Also provided are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotides encoding related proteins and antisense regulation -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polypucleotides can be used to identify CycD interacting proteins. All claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the CYCD1:1 cDNA from Zea mays which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Regulating growth and structure of plants by modulating protein that controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ДĎ
     밁
                               The present sequence is that of an isoform of the maize ZmCycD gene that encodes cyclin D (CycD, see AAX79321), a protein necessary C C for progression from G1 into S phase. The encoded protein binds to CDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma associated protein, releasing the E2F transcription factor which activates DNA synthesis. The invention provides maize CycD colynucleotides (see AAX94581-84) and polypeptides (see AAX99321-24) that are involved in cell cycle regulation. Also provided are recombinant expression cassettes (including ZmCycD in sense or antisense orientation), host cells, transgenic plants (especially corn, sorghum, sunflower, safflower, wheat, rice, alfalfa or oilseed Brassica) and antibody compositions. A claimed method of modulating the level of CycD protein in a cell comprises transforming the cell with a recombinant expression cassette comprising a CycD polynucleotide linked to a promoter, and growing the cell with a recombinant expression of the CycD protein in the cell. The CycD protein is present in an amount sufficient to alter cell drysion, increase the number of cell swifting increase conference alter cell arouth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAZ94581;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tassel, stalk, pollen, stamen) growth, produce organ ablation, produce parthenocarpic fruits, produce male sterile plants, enhance embryogenic response, increase callus induction, provide positive selection, increase plant regeneration, alter the time that cells are arrested in G1 or G0 phase or in a particular cell cycle, improve response to environmental stress including dehydration, heat or cold, increase the number of pods per plant, increase the number of seeds per pod or ear, alter the lag time in seed development, provide hormone-independent cell growth, or increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polypucleotides can be used to the control of the cells in the

```
Cyclo protein in the cell. The Cyc protein is present in an amount sufficient to alter cell division, increase the number of cells sufficient to alter cell division, increase the number of cells dividing, improve transformation frequencies, alter cell growth, increase the growth rate, increase crop yield, alter plant height or size, enhance or inhibit organ (seed, root, shoot, ear, tassel, stalk, pollen, stamen) growth, produce organ ablation, produce parthenocarpic fruits, produce male sterile plants, produce embryogenic response, increase callus induction, provide positive selection, increase plant regeneration, alter the time that cells are arrested in Gl or GO phase or in a particular cell cycle, improve response to environmental stress including cycle, improve response to environmental stress including the increase the number of seeds per pod or ear, alter the lag time in card divisions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    activates DNA synthesis. The invention provides maize CycD polynucleotides (see AA794581-84) and polypeptides (see AA79321-24) that are involved in cell cycle regulation. Also provided are recombinant expression cassettes (including zmCycD in sense or antisense orientation), host cells, transgenic plants (especially corn, sorghum, sunflower, safflower, wheat, rice, alfalfa or oilseed Brassica) and antibody compositions. A claimed method of modulating the level of CycD protein in a cell comprises transforming the cell with a recombinant expression cassette comprising a CycD polynucleotide linked to a promoter, and growing the cell for a time sufficient to induce expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene that encodes cyclin D (CycD, see AAY79323), a protein necessary for progression from G1 into S phase. The encoded protein binds to CDK4, and the active CycD-CDK4 hyperphosphorylates retinoblastoma associated protein, releasing the E2F transcription factor which
                                     seed development, provide hormone independent cell growth, or increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing CycD RNA or CycD polypeptides. CycD polynucleotides can be used to identify CycD interacting proteins. All claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of an isoform of the maize ZmCycD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 122-124; 134pp; English.
